Objective

Backend-oriented Full-Stack Developer with practical experience in building and testing end-to-end web applications. Proficient in the PERN stack with a growing capability in ASP.NET Core. Passionate about learning system architecture and data pipelines, and seeking to contribute my development skills while accelerating technical growth under experienced mentorship.

Education

BRAC University

Bachelor of Science in Computer Science and Engineering

2022 - Expected June 2026

CGPA: 3.69 / 4.00

Thesis is ongoing on **GateSarc: Explainable Multi-Omic Integration via Gated latent Fusion for Sarcoma Sub-type Diagnosis and Prognostic Risk Analysis**. All coursework completed and the Thesis defense scheduled for 13 June, 2026.

Technical Skills

Languages:	JavaScript, Python, Java, C, C++, C#, TypeScript (Learning)
Backend:	Node.js, Express.js, ASP.NET (learning), RESTful APIs, RAG, Redis, Nginx
Networks:	HTTP/HTTPS, SSL/TLS, SSH, DNS, CDN, TCP/IP
Databases:	pgvector, PostgreSQL, MongoDB, ACID
DevOps & Testing:	Docker, Linux, Bash, Git, Github Actions, Vim, Jest, Playwright
Frontend & AI Tools:	React.js, Tailwind CSS, Figma, Claude (Skills & Artifacts), GitHub Copilot, Cursor
Problem Solving:	LeetCode [Profile]

Projects

MetroSheba: AI-Driven Transit & Ticketing Platform

[\[Live\]](#) · [\[Video\]](#) · [\[GitHub\]](#)

Technologies: Express.js, Node.js, React, PostgreSQL, Redis, RAG

- Developed a full-stack web application featuring a **real-time station dashboard** that tracks passenger crowds; modifications made by system managers are instantly broadcast live to client displays.
- Integrated a smart AI chat assistant using **vector embeddings for semantic searches**, implementing an optimized **Redis cloud caching layer** to serve repeat queries instantly.
- Engineered an automated ticketing engine secured by a **dual-token authentication system** (Access/Refresh tokens) via **HttpOnly cookies** for safe session management.
- Set up automated testing suites using **Jest**, integrating an automated **GitHub Actions CI/CD workflow** to validate code reliability on every push.
- Conducted **stress and load testing** to evaluate application resilience, successfully identifying bottlenecks and tuning **connection-pooled queries** under heavy traffic.
- Utilized **AI-assisted workflows** to minimize boilerplate code and proactively catch syntax bugs during development.

Child Welfare Field Reporting System

[\[GitHub\]](#)

Technologies: ASP.NET Core, React, Tailwind, PostgreSQL, EF Core, Docker

- Developed a full-stack web application using **ASP.NET Core** and **React** to manage child welfare data.
- Implemented **JWT authentication** and role-based access control to protect sensitive backend endpoints.
- Built a real-time **emergency reporting module** to log and escalate urgent field crises.
- Created an analytics dashboard with **optimized EF Core queries** to track district-wise metrics.
- Integrated **CSV export features** for offline use and containerized the database using **Docker**.

Achievements

AI CERTs Prompt Engineer Level 1 Certification

2024

Learned LLM architecture fundamentals to apply advanced prompting methodologies (zero/few-shot, Chain-of-Thought, and Role prompting), significantly improving software development lifecycles and AI integration efficiency. [\[View Certificate\]](#)
